

Wellbore History

GENERAL

Well 30/9-17 R is a re-entry of well 30/9-17, which was terminated due to gas and mud flow from the annulus behind 9 5/8" casing. The re-entry was made after the rig, Treasure Saga, had completed drilling the replacement well 30/9-18 ca 50 m to the east-southeast of the 30/9-17 location. The purpose of the re-entry was plugging and permanent abandonment.

OPERATIONS AND RESULTS

Well 30/9-17 was re-entered (30/9-17 R) with the semi-submersible installation Treasure Saga on 11 April 1995.

The well was plugged and permanently abandoned on 13 April 1995 and classified as a junk well.

TESTING

No drill stem test was performed.
