

**Wellbore History**

**GENERAL**

Well 34/10-45 B drilled from the Gullfaks B installation to a structure south of Gullfaks Vest. The main purpose of the well was to test a prospect in the Middle Jurassic Age.

**OPERATIONS AND RESULTS**

Wildcat well 34/10-45 B was kicked off from development well 34/10-B-42 D on 10 October 2003 and drilled from slot 30 on the fixed installation Gullfaks B. It was drilled to TD at 7928 m (2206 m TVD) in the Middle Jurassic Tarbert Formation. The well was drilled with Paratherm oil based mud from kick-off to TD.

Gas/condensate was proven in a Cretaceous sandstone within the Kyrre Formation, informally named the Krans member.

No cores were cut and no fluid sample was taken.

The well was completed on 24 November 2003 as a gas/condensate discovery and subsequently reclassified to production well 34/10-B-42 E.

**TESTING**

No drill stem test was performed.
