

Wellbore History

GENERAL

Well 6406/2-6 R is a re-entry of the Ragnfrid discovery well 6406/2-6, which was suspended on 7 November 1998. The purpose was plugging and preparing for side-track well 6406/2-6 A.

OPERATIONS AND RESULTS

Well 6406/2-6 was re-entered with the semi-submersible installation Transocean Arctic on 17 May 2000.

The wellbore below 2715 m was plugged back and abandoned on 23 May 2000. Preparation for side-tracking was initiated.

TESTING

No drill stem test was performed.
