| N/A | N/A | <p>GENERAL</p> <p>Well 2/4-19 B was drilled on the Ekofisk Field in the Southern North Sea.</p> <p>OPERATIONS AND RESULTS</p> <p>Well 2/4-19 B was drilled from the Jacket 12 legs installation Ekofisk B. It was spudded on 16 December 1975 and drilled to TD at 4605 m in Jurassic age sediments. The hole was lost below 3926 m (the 7" casing shoe, in Early Cretaceous) after logging.</p> <p>The well penetrated top Jurassic at 4061 m. The whole of the Jurassic section penetrated was mainly claystone, shale and limestone. Four cores were cut: core 1 from 2974 to 2992.5 m, core 2 from 3102.7 to 3113.8 m, and cores 3 and 4 from 3144.3 m to 3159.7 m. No wire line fluid samples were taken.</p> <p>The well was plugged back to 3449 m and re-classed to development well. It was permanently abandoned 15 March 1976.</p> <p>TESTING</p> <p>The well was tested from perforations at 3006.5 m to 3009.6 m in the Danian Ekofisk Formation. Bottom hole samples were taken, but no flow measurements were conducted. The DST temperature was 110 deg C, measured at 2840.7 m</p> <p>></p> |
