

Wellbore History

GENERAL

Well 2/7-21 SR is a re-entry of well 2/7-21 S, which tested oil and gas in undefined pre-Cretaceous rocks of the Embla Field. The gas produced unexpectedly contained up to 40 ppm H₂S in addition to ca 5% CO₂. The purpose of the re-entry was further testing

OPERATIONS AND RESULTS

Well 2/7-21 SR was re-entered with the semi-submersible installation West Delta on 13 September 1991.

The reservoir pressure and H₂S content was tested.

The well was completed on 14 October 1991 and reclassified to development well 2/7-D-21.

TESTING

No drill stem test was performed.
