

GENERAL

Well 16/1-8 R is a re-entry of well 16/1-8, which made the Luno discover in Jurassic sandstone and conglomerate. The purpose of the re-entry was testing and plugging of the bore hole.

OPERATIONS AND RESULTS

Appraisal well 16/1-8 R was re-entered with the semi-submersible installation Transocean Winner on 2 October 2009.

No cores were cut and no wire line fluid samples were taken.

After testing the well was permanently abandoned on 10 October.

TESTING

The well was perforated and tested in two intervals with flow rate up to approximately 3547 barrels of oil per day (564 Sm³/day) through a one inch (40/64") choke.
